

# QLIMS Software

## GNS Science Review of QLIMS Product

GNS Science is New Zealand's leading provider in Earth, geoscience and isotope research consultancy services. They use their scientific knowledge from the atomic to the planetary scale, to enable them to create wealth, protect the environment and improve the safety of people.

*“QLIMS has enabled us to create a database of clients, methods & prices, instruments and sites”*

Their overall purpose is to understand the natural Earth system processes and resources and to translate these into economic, environmental and social benefits.

GNS Science has been using the OnQ Software's Information Laboratory Management System Solutions to assist them in their ability to gather information and track samples efficiently for their users.

Lab Administrator at GNS Science, Jenny oversees the administration of QLIMS and any report creation needed to extract results or other information from the application. QLIMS assists Jenny in being able to register samples for analysts, validate results and produce final reports and invoices.

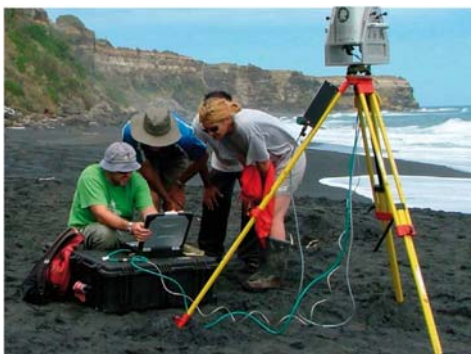

Sample ID	Lot No	Method Name	Parameter Name	SRESULT	Result
2013000624	7	Metals	Be		
2013000624	7	Metals	Cd		
2013000624	7	Metals	Cr		
2013000624	7	Metals	Fe		
2013000624	7	Metals	Ni		
2013000624	7	Metals	Hg		
2013000624	7	Metals	Pb		
2013000623	7	Metals	As		
2013000623	7	Metals	Be		

Jenny explains that “QLIMS has enabled us to create a database of clients, methods & prices, instruments and sites. We can track samples and see at what stage of analysis they are and create worklists for instruments so that our technicians know what needs to be analysed.”

QLIMS permits “gathering all sorts of information such as Work In Progress, Revenue by client or by instrument.” This allows them to physically access historical result information by site etc, which is extremely useful for geothermal sites, to see how they change, as explained by Jenny.

*“We are able to create result reports, quotations and invoices. Basically any information we want to extract from the database, we can by creating our own unique Crystal Report.”*

OnQ has partnerships with many local and international companies that share the same enthusiasm about our products.
